

A VA Contingency Solution

The bioPoint™ Bar-Coded Medication Administration System (3BCS) is the powerful and scalable bar-coded medication administration system which prevents costly and potentially fatal adverse drug events from threatening your ability to deliver patient care. bioPoint™ BPOC (3BCS) is the only BCMA contingency solution that enables clinicians to track administrations electronically when BCMA/VISTA/CPRS are unavailable due to network failure. When the network is online again, bioPoint™ BPOC instantly re-syncs the collected data.

Handheld PDAs, laptops or tablet PCs enable mobile point-of-care med. administration.

Benefits

- ▶ **Patient Safety**
Ensures right patient, medication, time, dosage and route
- ▶ **Complete Electronic Solution**
Reduces or eliminates paper documentation
- ▶ **Cost-Effective**
Suitable for facilities of all sizes
- ▶ **Faster Implementation**
Get up and running in a shorter time period
- ▶ **Flexible Technology**
Handheld PDAs, Laptops on Carts (COWs) or Tablet PCs

Features

- ▶ **Specimen Collection**
Track specimen collection and simultaneously generate specimen labels
- ▶ **Vital Signs Tracking**
Enables point of care providers to record vital sign data
- ▶ **Technology**
Barcode technology minimizes costs and maximizes safety
- ▶ **Reporting Capabilities**
Generates reports with the click of a button to provide detailed information on medication administration throughout your facility
- ▶ **Integration with Enterprise system and other Pharmacy systems**
Uses HL7 in addition to traditional interface methods to integrate with Enterprise Systems or Pharmacy Systems
